

Michael Greene
Intel Corporation

Title:

Preparing to work for industry: an employer's perspective

Abstract:

Michael Greene, Software and Solutions Group (SSG) director of Power/Performance and Simulation Technologies, leads the worldwide organization responsible for evaluating future Mobile, Business, and Enterprise product roadmaps' performance and power execution relative to competition over a five year period covering a broad range of development, enabling, architecture analysis and optimization efforts including virtual platforms, client/server projections, and thermal analysis tools. Michael joined Intel in 1990 and has worked in design, quality and reliability, architecture and planning, and technical marketing teams, and has managed several new product development and research efforts and engineering groups during this time.

The presentation will be followed by a questions and answers session in which he will be joined by Dr. William M. Smith, who has a PhD in mathematics and worked for Intel Corporation. While there he conducted technical and professional interviews for job applicants.
